Niewiadow Mars NM 450x250...

PRODUCT DESCRIPTION

Niewiadow Mars NM 450x250 is a twin-axle car transporter / platform trailer with GVW 3500 kg, designed for transporting cars, machines, utility vehicles and wider loads that require a stable loading platform.

This unit was built in an individual configuration and is available immediately from Witmar. It is a strong option for buyers who do not want to wait for a made-to-order trailer and need a large, stable platform for professional transport.

The 4500 x 2500 mm loading platform offers more width than standard 450 x 210 cm transporters, making this model suitable for wider vehicles, machines and non-standard loads. GVW 3500 kg, own weight 830 kg and payload 2670 kg make it practical for demanding business and transport use.

The construction is based on a welded, hot-dip galvanised steel frame. The aluminium Lohr floor improves durability of the working surface and supports everyday loading operations. The twin-axle setup improves stability and load distribution when driving with a heavier load.

Before purchase, compare the trailer parameters with the towing capacity of the vehicle, the weight of the transported machine or car and driving licence requirements. If you are interested in Niewiadow Mars NM 450x250 GVW 3500 kg, contact Witmar to confirm availability, documents and pickup options.
